If you missed this class, watch the video (link on bmi205.stanford.edu), answer the following questions in 1-2 sentences, and email answers to Margaret Antonio (antmarge@stanford.edu). No attachments, just paste answers in the email. Some questions may seem answerable with general field knowledge, but they should be answered in context of the lecture.

1. What are possible limitations of a clinical decision support system? How does ATHENA (the system presented in lecture) address those limitations, if at all?
2. What are gold standards for clinical decision support systems?
3. Based on post-assessments, what did doctors using ATHENA think of it?
