If you missed this class, watch the video (link on bmi205.stanford.edu), answer the following questions in 1-2 sentences, and email answers to Margaret Antonio (antmarge@stanford.edu). No attachments, just paste answers in the email. Some questions may seem answerable with general field knowledge, but they should be answered in context of the lecture.

1. What is STRIDE and how could one use it either as a clinician or an informatician? Perhaps give a generalized example and how you would query STRIDE.
2. Dr. Frankovich discussed several cases in which databases were mined or retrospective reviews were conducted to study a cohort. What are some biases in a retrospective review?
3. How can a “proxy” be useful in analyzing medical data? Give one example of a proxy.
